

Adding 9 to a number facts

A 'trick' that can be used in adding 9 facts is - we write the number that is one less than the number we are adding to 9 and write a 1 in front of that number in the tens place.

Also, the sum of the two digits in the answer always equals the number you added to 9.

Doubles plus one help:

A doubles plus one fact will always have numbers that are next to each other on the number line. Example: $1+2=$, $3+4=$, etc.

A strategy to use for adding numbers that are next to each other on the number line is: find the smaller number, double it, and add 1.
